GMO = Genetically Modified Organism GMOs are created in a lab, by inserting a gene from one organism into another unrelated organism, producing plants and animals that would never occur in nature. No long-term safety studies have been done on humans, but animal studies link the consumption of GMOs to an increase in allergies, kidney and liver disease, ADHD, cancer,

Genetic Engineering [back to top] Genetic engineering, also known as recombinant DNA technology, means altering the genes in a living organism to produce a Genetically Modified Organism (GMO) with a new genotype. Various kinds of genetic modification are possible: inserting a foreign gene from one species into another, forming a transgenic organism; altering an existing gene so that its ...

Genetic Engineering - BiologyMad

Genetic engineering is the science of altering living things by changing the information encoded in their deoxyribonucleic acid or "DNA". Genetic information is stored in DNA using four different chemicals called adenine, cytosine, guanine and thymine.

Spider silk has approximately a million and a half uses, and we're finding more every day. Due to its incredible strength in relation to size, it's been researched for use in bulletproof vests, artificial tendons, bandages, even computer chips and fiber optic cables for surgery. But harvesting enough silk requires tens of thousands of spiders and a lot of waiting time, not to mention the ...
