Solutions to Linear Algebra and Its Applications ...

Linear algebra moves steadily to n vectors in m -dimensional space. We still want combinations of
the columns (in the column space). We still get m equations to produce b (one for each row). Those
equations may or may not have a solution. They always have a least-squares solution. The interplay
of columns and rows is the heart of linear algebra.

70 Solutionsto Exercises Problem Set 4.1, page 202 1 Both nullspace vectors will be orthogonal to
the row space vector in R^3 . The column space of A and the nullspace of A^T are perpendicular lines in
 R^2 because $\text{rank} = 1$. 2 The nullspace of a 3 by 2 matrix with $\text{rank} = 2$ is $\{0\}$ (only the zero vector
because the 2 columns are independent). So $\dim \text{nullspace} = 0$, and $\dim \text{row space} = 2$.
