GIS And Its Application in Civil Engineering. Generally, a GIS is custom-designed for an organization. Hence, a GIS developed for an application, jurisdiction, enterprise, or purpose may not be necessarily interoperable or compatible with a GIS that has been developed for some other application, jurisdiction, enterprise, or purpose.

### **GIS Applications in a Civil Engineering Environment**

GIS in civil engineering software has a unique ability to capture manage and store spatially referenced data such as lines points and polygons or as continuous field. It is used as the spatial file; GIS helps in modeling presentations through handling a precise form of data that would else be compromised to store in a spatial database.

After studying the applications of GIS in civil engineering the conclusion was that GIS software is very helpful in civil engineering. Without GIS it will be very difficult and time taking process for us to select a site for any task. E.g. selecting a vehicles routing with the help of GIS software is easier and less time taking process as compare to doing it manually.

A tool that has proliferated within civil engineering in recent years is geographic information

systems (GIS). The goal of a tool is to supplement ability and knowledge that already exists, not to serve as a replacement for that which is lacking. To secure the benefits and avoid misuse of a burgeoning tool, engineers must understand the limitations, alternatives, and context of the tool.
