Offshore geotechnical engineering is a sub-field of geotechnical engineering. It is concerned with foundation design, construction, maintenance and decommissioning for human-made structures in the sea. Oil platforms, artificial islands and submarine pipelines are examples of such structures. The seabed has to be able to withstand the weight of these structures and the applied loads.

1. Introduction. Despite the fact that significant advances have occurred within almost every area of geotechnical design, with arguably the greatest developments in rock engineering being in numerical modelling capability, to date similar levels of advance have not been achieved in improving characterization of the geological variability that exists in natural rock masses.
