Genetic Engineering. Genetic engineering is the manipulation of genetic material by either molecular biological techniques or by selective breeding. While selective breeding has been practiced for thousands of years (domestication of the dog; farming corn; brewer's yeast) the manipulation of genetic material in vitro was developed in the 1970s.

Genetic engineering has always been a controversial topic, but, it seems, a relatively recent one. It initially sounds very sound unnatural; it is phenomenon that is completely incompatible with Mother Nature. The idea of it is arrogant—to think, how could we try to change what she has provided to us? In actuality, genetic engineering is not ...
