The term "Governing" means the action of varying the fuel supply in accordance with the load demand so that the engine runs at practically constant speed. Below are the some important methods of governing of internal combustion engines. 01) Hit & Miss Governing-This method is suitable for small gas engines. In this, the rotational motion of the cam actuates the rocker through the roller.

INTERNAL COMBUSTION ENGINE & GAS TURBINES Module - I INTRODUCTION. Heat engine: A heat engine is a device which transforms the chemical energy of a fuel into thermal energy and uses this energy to produce mechanical work. It is classified into two types- (a) External combustion engine (b) Internal combustion engine.

thus formed is used to run the engine. Thus, it is known as external combustion engine. In the case of internal combustion engine, the combustion of fuel takes place inside the engine cylinder itself. The IC engine can be further classified as: (i) stationary or mobile, (ii) horizontal or vertical and (iii) low, medium or high speed.
