GNU Make in Detail for Beginners. A project may contain several component divisions. These components may have complex inter-dependencies — for example, in order to compile component X, you have to first compile Y; in order to compile Y, you have to first compile Z; and so on. For a large project, when a few changes are made to the source,...

GNU Make in Detail for Beginners - Open Source For You

How to Use Variables. A variable is a name defined in a makefile to represent a string of text, called the variable's value. These values are substituted by explicit request into targets, prerequisites, commands, and other parts of the makefile. (In some other versions of make, variables are called

macros.)
